

Appl. No. : **Unknown**
Filed : **Herewith**

37. A mobile station for receiving information in a cellular telecommunications system, the mobile station comprising:

a receiver unit configured to receive an encrypted message broadcast on a common channel of a cell of the cellular telecommunications system;

a display to display the message, when decrypted, to a user; and

a removable module comprising a memory for storing a decryption key, and being configured to decrypt the message using the stored decryption key.

REMARKS

The foregoing amendments are to more closely conform the application to U.S. practice.
No new matter is added. Entry of the amendments is respectfully requested.

Respectfully submitted,

KNOBBE, MARTENS, OLSON & BEAR, LLP
